Job Application for Software Engineering Position

Dear Hiring Manager,

I am writing to express my interest in the software engineering position at your organization. With a strong background in full-stack development and AI/ML technologies, I believe I would be a valuable addition to your team.

As a Tech Lead at BinduLogic, I have successfully led the development and deployment of hospital management software across 10+ public hospitals in Bangladesh. My experience spans both frontend and backend development, with expertise in React, Node.js, TypeScript, and modern DevOps practices. I have also worked as a contractor for Maplarge, developing GIS applications and testing Computer Vision models.

My technical skill set includes proficiency in multiple programming languages (JavaScript/TypeScript, Python, C/C++, Dart), modern web frameworks (React, Next.js), backend technologies (Node.js, Express.js, Flask, Django), and specialized areas such as RAG, Graph RAG, GIS, and Computer Vision. I have a proven track record of delivering scalable solutions using cloud platforms (AWS, GCP) and containerization technologies (Docker, Ansible).

I have demonstrated my ability to build complex systems through projects like Gordian AI's Everstar, which achieved 0% AI hallucination rate using advanced RAG architecture. My work on hospital e-ticketing systems showcases my capability to develop mission-critical applications with end-to-end type safety and compliance with international standards.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills and experience align with your organization's needs.

Sincerely,

Shihab Sikder
